

Abdur Rehman

abdulrehman2001y@gmail.com | +92 334 6828900 | LinkedIn | GitHub

Summary

Full-Stack Developer with proven experience in designing and delivering scalable, high-performance applications. Skilled in React.js, API integration, and secure back-end architecture, with a strong focus on building reliable and user-centric systems. Experienced in end-to-end product development, role-based platforms, and payment integrations. Demonstrated leadership through successful project delivery and team collaboration in professional environments.

Experience

WayOut Lab – Full-Stack Developer

Lahore, Pakistan

October 2025 — Present

- Developing a monetized social media platform with end-to-end full-stack ownership.
- Implementing Stripe-based payment, payout, and earnings distribution systems.
- Designing role-based architecture and scalable backend workflows for content, events, and user engagement.

Key Projects

Live Kanvas

WayOut Lab | Current

Stripe, Full-Stack Architecture, Role-Based Access Control

- Developed and maintained Stripe-based payment flows for creator earnings and platform payouts.
- Implemented role-based access control for Admin, Creator, and Backend operations.
- Built event-driven backend logic to track content uploads, screen time, and user engagement.
- Managed earning calculations based on screen time and engagement metrics.
- Ensured secure and scalable payout mechanisms for creators using Stripe.

Airec – Full-Stack Developer (Remote)

Dover, United States

October 2025 — Present

- Leading end-to-end development of Airec, an automated recruitment and hiring platform with full-stack ownership.
- Designing and implementing role-based workflows for Admin, Applicant, Hiring Manager, and Reviewer.
- Building automated job lifecycle management including job creation, assessment generation, application tracking, and hiring decisions.
- Integrating third-party job boards (LinkedIn, Jooble) for automatic job posting and crawl-based updates.
- Ensuring secure authentication, authorization, and scalable backend architecture across all platform modules.

Key Projects

Airec Recruitment Platform

Airec | Current

Full-Stack Architecture, Role-Based Access Control, Job Automation

- Developed role-based access for super Admin, Admins, Applicants, Managers, and Reviewers to manage recruitment workflows.
- Built automated assessment creation and evaluation pipelines for candidate screening.
- Implemented event-driven backend to handle job posting, applications, review feedback, and hiring decisions.
- Integrated external job boards for automated job publishing and updates.
- Designed scalable and secure backend services to support multi-role operations and large candidate volumes.

PhebSoft Pvt. Ltd. – Full-Stack Developer

Islamabad, Pakistan

July 2024 – October 2025

- Engineered high-performance applications using React.js, Next.js, and Flask, supporting 5+ international clients.
- Implemented automation dashboards and API integrations, reducing manual effort by 40%.
- Ensured secure, optimized, and seamless system integration across financial and insurance platforms.

Key Projects

Freeway x Uber Insurance Project

PhebSoft Pvt. Ltd. | 2025

React.js, Flask, MongoDB, Zustand, Duo MFA

- Maintained the insurance platform for Uber UK drivers in collaboration with Freeway.
- Implemented Duo-based MFA authentication, enhancing platform security by 2x.
- Optimized front-end workflows with Zustand for global state management.

Education

Sir Syed CASE Institute of Technology

BS in Software Engineering

2020 – 2024

Relevant Coursework: Software Engineering, Project Management, Computer Networks, Artificial Intelligence, Computer Vision

Skills
